

Why do I need Underlay?

There are a number of reasons why you should purchase Underlay to use with your rug. Underlay should be considered as an investment that will assist in maintaining your rugs appearance for the duration of it's lifetime and as a safety precaution to avoid tripping hazards.

- Stop your rug from moving on hard floors and creeping on carpet.
- Stop your rug from curling at the corners and pushing up against coffee table legs or other pieces of furniture.
- Stop your rug from stretching out of shape.
- Provide extra cushioning.
- Stop abrasion on timber or delicate floor surfaces.
- Avoid tripping hazards from sliding, creasing or curling.

Teebaud Underlay is made in America and unlike other cheaper alternatives Teebaud will continue to work long past the life of your rug

TEEBAUD® has been developed and engineered to obtain the best nonskid performance for a rug underlay. The light cushioning effect allows the Underlay and the rug to breathe together with no risk of oxidation or discoloration to any flooring surface. TEEBAUD® will not give a permanent bond to the floor. It is a repositionable underlay: harmless to carpeting, floors and rugs.

Installation of Teebaud Underlay

TEEBAUD® is a multi-purpose non-skid underlay. It can be used on wall-to-wall carpeting or on smooth flooring surfaces.

RUG on smooth flooring surface:

- Cut TEEBAUD® about 2-3cm smaller than the rug to be installed.
- Remove the plastic release liner.
- Place TEEBAUD®'s gray side down, facing the smooth floor.
- Then place the rug on top of TEEBAUD®'s white side.

RUG on wall-to-wall carpeting:

- Cut TEEBAUD® 2-3cm smaller than the rug to be installed.
- Remove the plastic release liner.
- Place TEEBAUD®'s white side down, facing the wall-to-wall carpeting.
- Then place the rug on top of TEEBAUD®'s gray side.

CUTTING -TEEBAUD® can be easily cut with scissors or a utility knife however in most cases we will provide it to fit the size of your rug. If the Underlay protrudes past the area of the rug it can be trimmed with scissors to the desired size.

FLOOR PREPARATION -Prior to installing TEEBAUD®, the floor should be vacuumed, clean and dry. Do not install TEEBAUD® on a wet floor. In order to obtain a long-lasting non-skid performance, avoid frequent removal and re-installation of TEEBAUD® from its designated installation area.

OVERSIZED RUGS -If several pieces of TEEBAUD® are necessary for one rug, simply apply as many pieces as needed, side-by-side. Taping or splicing is NOT necessary.
